

Allot Solutions for Service Providers

Allot Service Gateway solutions are designed to help you deliver personal network services with exceptional quality of experience to any subscriber over any access and at any scale, so you can:

- Differentiate your offering with service innovation
- Increase service revenue and customer loyalty
- Improve network performance and user experience
- Protect your network and customers from cyber threats

Multiservice Value

Allot Service Gateway solutions are powered by the industry's leading multiservice platform that integrates essential capabilities across six domains.

Network Intelligence

Gain complete visibility and valuable insight on network usage and user behavior to drive business decisions. Interactive dashboards provide a 360° view of app and user traffic, while Allot self-service analytics tools help you generate custom views on demand. Allot's rich network data records also enhance the insight you gain from BI and big data systems.

Traffic Management

Your brand is built on the quality of network service your customers perceive. Allot Traffic Management solutions save time and money by automating your ability to proactively control congestion, optimize service delivery, and shape the Quality of Experience (QoE) your network delivers to each application and user.

DDoS Protection

Your network business depends on 100% service availability. That's why Allot helps you establish a first line of defense against inbound and outbound Denial of Service threats. Allot accurately detects and mitigates DDoS attacks in seconds, before your network service suffers costly disruption or downtime.

Policy Control & Charging

Allot helps you maximize customer lifetime value by leveraging application-based and usage-based data plans that cater to the unique and dynamic needs of prepaid, postpaid, consumer, and business customers. Allot PCC solutions integrate quickly and seamlessly with your authentication, provisioning and charging systems to assure fast service rollout and time-to-revenue.

Security Services

Allot Security as a Service solutions are a proven way to enhance your brand and generate incremental ARPU as your network becomes the one-stop shop for anti-malware, parental controls, ad blocking, and other personal web security services that protect consumers and businesses from online threats and undesirable content.

Value Added Services

Leverage Allot partnerships and experience for fast deployment of end-to-end service solutions. Allot Service Gateway solutions employ open and standard interfaces to accelerate integration in any network and with any 3rd party service.

High performance and practically unlimited scalability make Allot Service Gateway the multiservice platform of choice for more than 1000 service providers around the world who rely on Allot

Service Gateway solutions to differentiate their network services and improve their bottom line. Below are just a few examples of service providers using Allot solutions to stand out and deliver.
